Subject: Microsoft Settlement

I am opposed to the settlement.

Basically, Microsoft is not being punished, and is allowed to dump their product on the school market the last hold out of the competition (Apple)

The competing software should be purchased with the money (GNU/Linux, Apple) and installed in schools so that new computer users develop knowledge of the competing products.

Microosft should be enjoined from anti-competitive practices, such as making their OS's work with LILO or other multi-boot loaders.

I agree that Microsoft, should be broken up, because their continued refusal to apologize for their wrong-doing indicates that their attitude has not changed.
